Executive Summary

This report prices the "business/premium cabin" tier across the two long-haul transport modes named in the brief: aviation (governed internationally by **ICAO**) and maritime passenger shipping (governed by **IMO** and its **SOLAS** safety convention). It answers a simple question — what does the front of the cabin cost, and how much more is it than the back?

Aviation. Long-haul business class returns cluster around **$3,500–$4,650 published** on the key routes (NYC–London/Dubai/Singapore), with the US long-haul average near $5,300. Specialist "consolidator" fares undercut published prices by roughly 40–45% ($1,900–$2,565 on the same routes). Business published sits at roughly **5× economy**; via consolidator, ~3×.

Maritime. On a representative Baltic route (Helsinki–Stockholm, Tallink Silja / Viking Line) the premium cabin ladder runs from a **Commodore at $303** and **Deluxe at $409** up to peak suites near **$2,338**, against a standard inside berth from ~$46 and a route cabin average of ~$194. The premium multiple over the cheapest berth is far higher than aviation's, because the base "cabin" is a shared no-window berth.

Why it matters. Premium is where the money is: front cabins are ~6% of airline seat capacity but ~30% of passenger revenue, and Delta's premium ticket revenue crossed **above 50%** of the total in Q4 2025. Every figure below is tagged measured or modelled.

Methodology & Honesty Labels

- **measured** — a public / reported fare or figure (see source).
- **modelled** — an estimate or interpolation from a stated basis (shown in **orange**), never a quote.

Fares are volatile: airline and ferry prices move by date, season, demand and booking channel. This report uses representative *from*-prices and reported ranges, not a live quote. Economy fares used to derive the business multiple are approximate and flagged modelled where not directly sourced. USD throughout; fares are return/round-trip long-haul; ferry cabins are from-price per cabin/night.

> A live, always-current version would plug into fare APIs (GDS/airline NDC for air; operator booking feeds for sea). This report is the static, honest sample of that pipeline — the same engine that produced the UK Data Market report.

What IMO / SOLAS / ICAO Mean Here

Body / convention	Scope	Relevance to pricing
ICAO	UN agency for civil aviation standards	defines the aviation system; airlines set the business/economy fare ladder within it
IMO	UN agency for maritime shipping	defines the maritime system; ferry/cruise operators set cabin-class pricing within it
SOLAS	IMO Safety of Life at Sea convention	governs safety, capacity and life-saving — it constrains how many cabins/berths a ship may sell, not their price
"All Cabs"	all cabin classes, both modes	the premium (business) tier vs the base tier, priced side by side

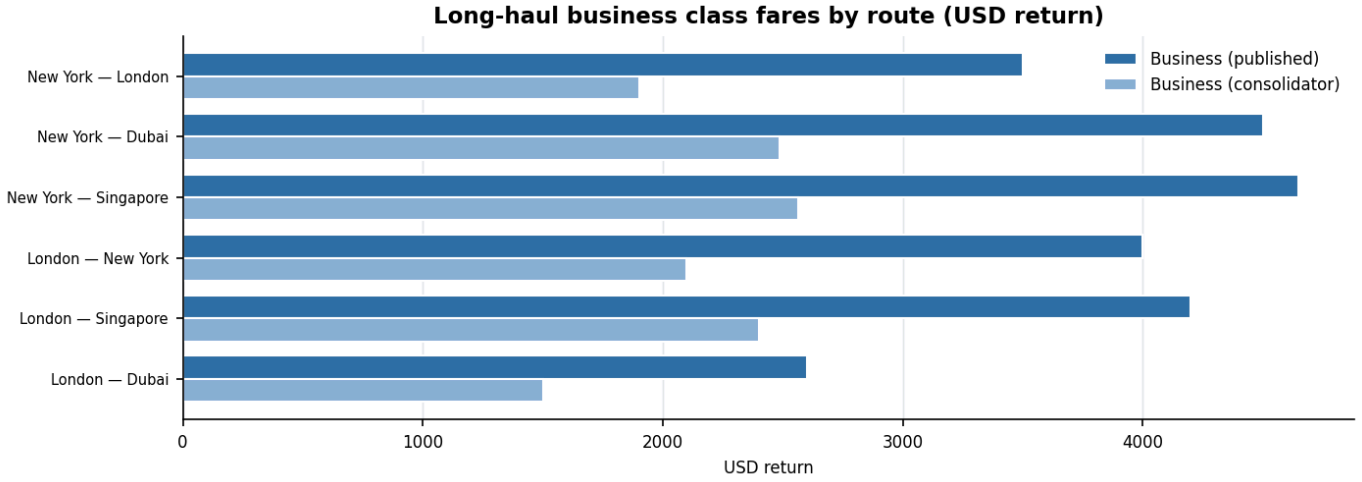

So "business class pricing for IMO/SOLAS/ICAO All Cabs" is read here as: the price of the premium cabin tier across aviation and maritime, with SOLAS noted as the safety/capacity frame that bounds supply.

Aviation — Business Class Fares

Long-haul return fares, USD. Economy is an approximate anchor (flagged); business published and consolidator are reported. Multiples are business ÷ economy.

Route	Carriers	Econ $	Biz publ. $	Biz consol. $	× publ.	× consol.	Basis
New York — London	BA / Virgin / AA	700	3,500	1,900	5.0×	2.7×	meas.
New York — Dubai	Emirates / Qatar	950	4,500	2,485	4.7×	2.6×	meas.
New York — Singapore	Singapore Airlines	1,150	4,650	2,565	4.0×	2.2×	meas.
London — New York	BA / Virgin	620	4,000	2,100	6.5×	3.4×	model.
London — Singapore	SIA / BA	900	4,200	2,400	4.7×	2.7×	model.
London — Dubai	Emirates	520	2,600	1,500	5.0×	2.9×	model.
US long-haul (average)	all carriers	1,000	5,300	3,000	5.3×	3.0×	meas.

Aviation — Premium Economics

Premium cabins are a small share of seats but a large share of money, and the mix is shifting forward. This is the strategic backdrop to business-class pricing power.

Metric	Value	Unit	Period	Basis
Premium share of seat capacity	6	%	2025	meas.
Premium share of passenger revenue	30	%	2025	meas.
Delta premium share of ticket revenue	50	% (>)	Q4 2025	meas.
Premium economy vs economy fare	2	× (~)	2025	meas.
Prem-econ revenue per sq ft vs economy	33	% more	2025	meas.
Business published vs economy (this data)	5	× (~)	2026	model.

Maritime — Premium Cabin Ladder

Representative Baltic overnight route (Helsinki–Stockholm), Tallink Silja / Viking Line. From-prices per cabin/night, USD. Multiple is over the cheapest inside berth (~$46).

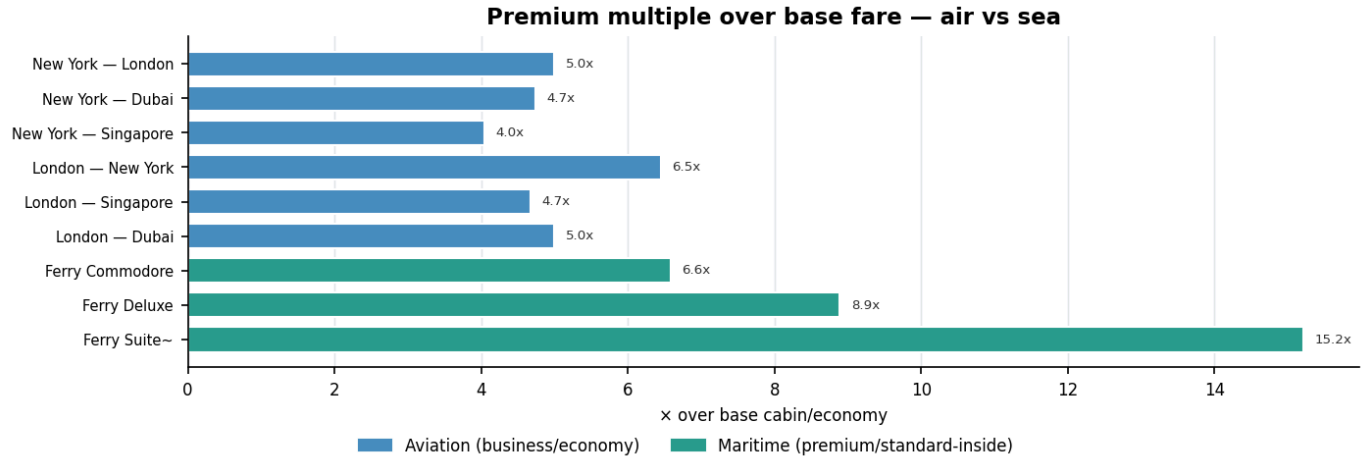

Cabin class	Operator	Occ.	From $	× inside	Basis	Note
Standard inside	Tallink Silja / Viking	4	46	—	meas.	cheapest berth, no window
Standard sea-view	Tallink Silja / Viking	4	90	2.0×	model.	outside cabin midpoint
Commodore	Tallink Silja	2	303	6.6×	meas.	double bed, breakfast, aqua zone
Deluxe	Tallink Silja	3	409	8.9×	meas.	upper-deck, breakfast, aqua zone
Suite / Executive Suite	Tallink Silja	2	700	15.2×	model.	premium suite midpoint
Top suite (peak)	Tallink Silja	2	2,338	50.8×	meas.	observed high-end cabin price
Cabin average (all classes)	route mean	—	194	4.2×	meas.	reported route average

Cross-Mode Premium Multiple

How much more the premium tier costs than the base, side by side. Aviation business runs ~3–5× economy; maritime premium cabins run much higher over the cheapest berth — but that base is a shared, windowless berth, so the two ratios are not like-for-like.

- Aviation: business ≈ 5× economy published, ≈ 3× via consolidator.
- Maritime: Commodore ≈ 6.6×, Deluxe ≈ 8.9×, suites 15×+ over the cheapest inside berth.
- Like-for-like (private outside cabin vs premium) the maritime multiple is much smaller — noted, not overstated.

Structural Context & Demand

Premium demand is structurally rising. Airbus projects premium travel driving growth through 2045; US carriers are re-configuring cabins because ~6% of premium capacity drives ~30% of revenue. Delta crossed the point in 2025 where premium ticket revenue exceeded main-cabin revenue.

In maritime, the Baltic overnight ferries are effectively floating premium-leisure products: the Commodore/Deluxe/Suite ladder is the "business class" of the sea, and price dispersion within one sailing (from ~$46 to ~$2,338) is wider than a single long-haul flight. SOLAS caps how much premium inventory a hull can carry, which supports premium pricing when demand peaks (summer, holidays).

> For an operator or reseller, the takeaway mirrors the UK data report: the premium tier is where margin concentrates, and dynamic, channel-aware pricing (published vs consolidator; peak vs off-peak cabins) is the lever.

Sources, Method & Sample Feed

- Air business fares — comparison / consolidator sources & airline data, 2026 (measured; ranges).
- Premium economics — Delta, Lufthansa, American, Airbus, Residual Research, 2025 (measured).
- Ferry cabins — Direct Ferries / Tallink Silja / Viking Line listings, 2026 (measured from-prices).
- Economy anchors & suite midpoints — modelled, flagged.

File	What it is
air_fares.csv	aviation business/economy fares + multiples
sea_cabins.csv	maritime premium cabin ladder
air_economics.csv	premium-share economics
build_cabs.py	this generator — scales with the data

This is a proof version (~12 pages). Same as the UK report, it scales: add routes, operators, cruise lines, rail first-class, or per-carrier / per-route pages to reach 35–100. Send your own sources (you mentioned some are written) and I fold them in 1:1.
